

**IN THE CLAIMS:**

A status of all the claims of the present Application is presented below:

1. **(Original)** A portable computer system, comprising:  
a bezel adapted to support a screen member; and  
an antenna disposed at least partially between the bezel and the screen member.
2. **(Original)** The system of Claim 1, wherein the antenna comprises a conductive trace deposited on an interior surface of the screen member.
3. **(Original)** The system of Claim 1, further comprising a display device disposed adjacent an interior surface of the screen member.
4. **(Original)** The system of Claim 1, wherein the antenna extends a predetermined distance along an interior surface of the screen member.
5. **(Original)** The system of Claim 1, wherein the antenna comprises a pattern portion.
6. **(Original)** The system of Claim 5, wherein the antenna comprises an extension portion extending from the pattern portion to a screen member connector.
7. **(Original)** The system of Claim 1, wherein the antenna comprises an extension portion extending to at least two side areas of the screen member.
8. **(Original)** The system of Claim 1, further comprising a screen member connector adapted to conductively couple the antenna to an internal antenna circuit of the portable computer system.
9. **(Original)** The system of Claim 1, wherein the bezel is adapted to conductively couple the antenna to an internal antenna circuit of the portable computer system.

10. **(Original)** The system of Claim 1, wherein the bezel comprises a conductive via conductively coupling the antenna to an internal antenna circuit of the portable computer system.

11. **(Original)** A portable computer system, comprising:  
means for supporting a screen member; and  
antenna means disposed at least partially between the supporting means and an interior surface of the screen member.

12. **(Original)** The system of Claim 11, further comprising means for conductively coupling the antenna means to an internal antenna circuit of the portable computer system.

13. **(Original)** The system of Claim 11, further comprising means for conductively coupling the antenna means to the supporting means.

14. **(Currently Amended)** The system of Claim 11, wherein the antenna means comprises conductive means deposited on the interior surface of the ~~cover member~~ screen member.

15. **(Original)** The system of Claim 11, further comprising a display means disposed adjacent the interior surface of the screen member.

16. **(Original)** A method of manufacturing a portable computer system, comprising:  
providing a screen member having an antenna disposed on an interior surface thereof;  
and  
providing a bezel adapted to support the screen member, at least a portion of the antenna disposed between the bezel and the screen member.

17. **(Original)** The method of Claim 16, further comprising conductively coupling the antenna to an internal antenna circuit of the portable computer system.

18. **(Original)** The method of Claim 16, wherein providing a screen member comprises providing a screen member having a pattern antenna portion disposed on the interior surface thereof.

19. **(Original)** The method of Claim 18, wherein providing a screen member comprises providing a screen member having an extension antenna portion extending from the pattern antenna portion to a screen member connector.

20. **(Original)** The method of Claim 16, further comprising conductively coupling the antenna to the bezel.

21. **(Original)** The method of Claim 16, wherein providing a bezel comprises providing a bezel having a conductive via conductively coupling the antenna to an internal antenna circuit of the portable computer system.

22. **(Original)** A portable computer system, comprising:  
a screen member;  
a display device disposed adjacent an interior surface of the screen member; and  
an antenna disposed on the interior surface of the screen member.

23. **(Original)** The system of Claim 22, wherein the antenna comprises a pattern portion.

24. **(Original)** The system of Claim 23, wherein the antenna comprises an extended portion extending from the pattern portion to a screen member connector.

25. **(Original)** The system of Claim 22, wherein the antenna is conductively coupled to an internal antenna circuit of the portable computer system.

26. **(Original)** The system of Claim 22, further comprising a bezel adapted to conductively couple the antenna to an internal antenna circuit of the portable computer system.

27. **(Original)** The system of Claim 22, further comprising a bezel having a flange disposed between the screen member and the display device.

28. **(Original)** The system of Claim 22, further comprising a bezel having a conductive via conductively coupling the antenna to an internal antenna circuit of the portable computer system.

29. **(Original)** The system of Claim 22, wherein the antenna extends a predetermined distance on the interior surface of the screen member.

30. **(Original)** The system of Claim 22, further comprising a bezel flange disposed between the screen member and the display device, the antenna disposed between the bezel flange and the interior surface of the screen member.
